Woodleigh Village and Heritage Walk

LANDinc (formerly known as STX Landscape Architects) is proud to announce that one of our projects, Woodleigh Village & Heritage Walk, has been selected as one of the featured projects for the Singapore Archifest 2026, SILA SGAF+ Tour: Landscapes in Convergence.

Woodleigh Village is an integrated mixed-use development within Singapore's Bidadari Estate, seamlessly connecting residential towers, a neighbourhood centre, hawker centre, childcare, bus interchange, and Woodleigh MRT station through a cohesive landscape network. More than a collection of open spaces, the landscape establishes a connected public realm that weaves together movement, community life, heritage, and nature into a seamless everyday experience.

A defining feature of the project is the Heritage Walk, where the landscape celebrates the site's historical significance within the former Bidadari Estate. Existing mature Yellow Rain Trees were identified as key landscape assets and became the primary organising framework for the design rather than site constraints. Their locations and Tree Protection Zones informed the alignment of pathways, gathering spaces, viewing decks, and community plazas, allowing the landscape to evolve from the site's existing natural structure.

The Heritage Walk becomes the social and cultural spine of the development, where cantilevered decks, boardwalks, play spaces, and heritage-inspired artworks encourage people to pause, gather, and engage with the landscape. By allowing nature, heritage, and community to shape one another, the project demonstrates how landscape architecture can strengthen both the identity and liveability of a high-density urban neighbourhood while reinforcing a strong sense of place.
